MATHEMATICS OF COMPUTATION

TABLE OF CONTENTS

JANUARY 1993

James H. Bramble, Zbigniew Leyk, and Joseph E. Pasciak, Iterative schemes for nonsymmetric and indefinite elliptic boundary value problems . 1

Torgeir Rusten and Ragnar Winther, Substructure preconditioners for elliptic saddle point problems 23

Howard Swann, On the use of Lagrange multipliers in domain decomposition for solving elliptic problems 49

Donald A. French and J. Thomas King, Analysis of a robust finite element approximation for a parabolic equation with rough boundary data . 79

Ch. Lubich and A. Ostermann, Runge-Kutta methods for parabolic equations and convolution quadrature 105

Nai-Ying Zhang, On fully discrete Galerkin approximations for partial integro-differential equations of parabolic type 133

Kenneth Eriksson and Claes Johnson, Adaptive Streamline Diffusion finite element methods for stationary convection-diffusion problems..... 167

J. A. Mackenzie and K. W. Morton, Finite volume solutions of convection-diffusion test problems..... 189

Helge Holden and Nils Henrik Risebro, A method of fractional steps for scalar conservation laws without the CFL condition 221

Jian-Guo Liu and Zhouping Xin, L^1-stability of stationary discrete shocks 233

Eitan Tadmor, Total variation and error estimates for spectral viscosity approximations 245

Stefan Heinrich and Peter Mathé, The Monte Carlo complexity of Fredholm integral equations 257

Seymour Haber, Two formulas for numerical indefinite integration..... 279

John A. Crow, Quadrature of integrands with a logarithmic singularity .. 297

Clément Frappier and Patrick Olivier, A quadrature formula involving zeros of Bessel functions 303

F. Peherstorfer, On the remainder of Gaussian quadrature formulas for Bernstein-Szegö weight functions 317

Peter J. Grabner and Robert F. Tichy, Spherical designs, discrepancy and numerical integration 327

Horst Alzer, Some gamma function inequalities 337

Elliot Linzer and Ephraim Feig, Modified FFTs for fused multiply-add architectures 347

Dakai Wang and Aaldert Compagner, On the use of reducible polynomials as random number generators 363

Jürgen Eichenauer-Herrmann, Statistical independence of a new class of inversive congruential pseudorandom numbers 375

S. Gupta and D. Zagier, On the coefficients of the minimal polynomials of Gaussian periods 385

A. O. L. Atkin and F. Morain, Finding suitable curves for the elliptic curve method of factorization 399

Alfred J. Menezes, Scott A. Vanstone, and Robert J. Zuccherato, Counting points on elliptic curves over F_{2^m} 407

H. J. Godwin and J. R. Smith, On the Euclidean nature of four cyclic cubic fields 421

Jukka Pihko, On the minimal elements for the sequence of all powers in the Lemoine-Kátai algorithm 425

Reviews and Descriptions of Tables and Books 431

Mikhlin **1**, Szabó and Babuška **2**, Schiesser **3**, Zwillinger **4**, Dongarra, Messina, Sorensen, and Voigt, Editors **5**, Snyder and McCuen **6**, Farin, Editor **7**, Barnhill, Editor **8**, Vavasis **9**, Deák **10**, Brackx and Constales **11**, Piacentini Cattaneo and Strickland, Editors **12**

Supplement to "Adaptive Streamline Diffusion finite element methods for stationary convection-diffusion problems" by **Kenneth Eriksson and Claes Johnson** S1

TABLE OF CONTENTS

APRIL 1993

James H. Bramble and Joseph E. Pasciak, New estimates for multilevel algorithms including the V-cycle 447

Per Lötstedt and Bertil Gustafsson, Fourier analysis of multigrid methods for general systems of PDEs 473

Christophe Devulder, Martine Marion, and Edriss S. Titi, On the rate of convergence of the nonlinear Galerkin methods 495

J. P. Lohéac, F. Nataf, and M. Schatzman, Parabolic approximations of the convection-diffusion equation 515

Tian-xiao Zhou and Min-fu Feng, A least squares Petrov-Galerkin finite element method for the stationary Navier-Stokes equations 531

Bernard Bialecki and Ryan I. Fernandes, Orthogonal spline collocation Laplace-modified and alternating-direction methods for parabolic problems on rectangles 545

Martin Buhmann and Arieh Iserles, Stability of the discretized pantograph differential equation 575

R. A. Trompert and J. G. Verwer, Runge-Kutta methods and local uniform grid refinement 591

L. Abia and J. M. Sanz-Serna, Partitioned Runge-Kutta methods for separable Hamiltonian problems 617

Mohamed Bin Suleiman, Some necessary conditions for convergence of the GBDF methods 635

Paul N. Swarztrauber, A parallel algorithm for computing the eigenvalues of a symmetric tridiagonal matrix 651
T. Y. Li and Xiaoshen Wang, Solving real polynomial systems with real homotopies 669
José Mario Martínez, A theory of secant preconditioners 681
P. P. B. Eggermont and Ch. Lubich, Operational quadrature methods for Wiener-Hopf integral equations 699
Takemitsu Hasegawa, Hirosi Sugiura, and Tatsuo Torii, Positivity of the weights of extended Clenshaw-Curtis quadrature rules 719
Allan J. MacLeod, Chebyshev expansions for modified Struve and related functions 735
Raymond Couture, Pierre L'Ecuyer, and Shu Tezuka, On the distribution of k-dimensional vectors for simple and combined Tausworthe sequences 749
Shu Tezuka and Masanori Fushimi, Calculation of Fibonacci polynomials for GFSR sequences with low discrepancies 763
Taizo Kanenobu and Toshio Sumi, Polynomial invariants of 2-bridge knots through 22 crossings 771
Gerhard J. A. Schneider, The structure of the projective indecomposable modules of the Suzuki group Sz(8) in characteristic 2 779
Igor E. Shparlinski, On bivariate polynomial factorization over finite fields 787
M. Pohst and J. Graf v. Schmettow, On the computation of unit groups and class groups of totally complex quartic fields 793
Hiroyuki Fujita, The minimum discriminant of totally real algebraic number fields of degree 9 with cubic subfields 801
Robert Styer, Small two-variable exponential Diophantine equations 811
W. Plesken and M. Pohst, Constructing integral lattices with prescribed minimum. II 817
Zhenxiang Zhang, On a problem of Erdős concerning primitive sequences 827
Zhenxiang Zhang, A B_2-sequence with larger reciprocal sum 835
R. G. E. Pinch, Squares in quadratic progression 841
Reviews and Descriptions of Tables and Books 847
Aspray **13**, Buchanan and Turner **14**, Golub and Ortega **15**, Light, Editor **16**, Light, Editor **17**, Chen and Zhou **18**, Haug and Deyo, Editors **19**, Whiteman, Editor **20**, Cohen, Halpern, and Joly, Editors **21**, Chui **22**, Brezinski **23**, Brezinski and Zaglia **24**, Espelid and Genz, Editors **25**, Machielsen **26**, Floudas and Pardalos, Editors **27**, Bertsekas **28**, Abell and Braselton **29**, Maccallum and Wright **30**, O'Malley, Editor **31**, Nisan **32**, Flournoy and Tsutakawa, Editors **33**, Bergum, Philippou, and Horadam, Editors **34**
Corrigendum 877
Supplement to "Fourier analysis of multigrid methods for general systems of PDEs" by **Per Lötstedt and Bertil Gustafsson** S3

Supplement to "On the distribution of k-dimensional vectors for simple and combined Tausworthe sequences" by **Raymond Couture, Pierre L'Ecuyer, and Shu Tezuka** S11
Supplement to "Polynomial invariants of 2-bridge knots through 22 crossings" by **Taizo Kanenobu and Toshio Sumi** S17
Supplement to "The structure of the projective indecomposable modules of the Suzuki group Sz(8) in characteristic 2" by **Gerhard A. Schneider** S29
